

RockPaperPose Marquee event requirements

Please read through these requirements thoroughly before booking, if you are unsure, please contact us on info@rockpaperpose.com to discuss your options.

- Our photobooth can not be in an outdoor environment without appropriate protection from the elements. Appropriate protection includes an enclosed marquee or structure where the Photobooth cannot be negatively affected by the weather or flooring. If possible, it is best to provide an image of the location for us to assess.
- Suitable ground is important for our Photobooth to be used in an outdoor setting. This must be in the form of a hard temporary or permanent flat solid flooring which will need to be able to hold a weight of 100kg. The photobooth and backdrop cannot be on grass or a fabric or fibre flooring. It is best to speak with your wedding venue to find out what the flooring consists of.
- Our photobooth will need an appropriate power source. We will also need proof that the generator providing the power is no older than four years old due to insurance purposes.
- To use the Email functionality of the booth (sending pictures via email) we will require a strong Wi-Fi connection. This must be a minimum of 5 MBPS. However, if this is not possible, we will attempt to tether from our equipment, but this may be unsuccessful if there is not adequate 5G in the area.
